## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with J. Mark Wilkinson (Reg. No. 48,885) on 28 April 2004.

The application has been amended as follows:

Claim 9 (Currently Amended) A detector for a computed tomography system, the detector comprising:

a fiber optic scintillator configured to receive high frequency electromagnetic energy from a first direction and convert the high frequency electromagnetic energy to light energy having a first intensity, and further configured to output the light energy in a second direction generally parallel to the first direction ~~having at~~ a second intensity, wherein the second intensity exceeds the first intensity; and

a photodiode coupled to the scintillator generally perpendicular to both the first and second directions and configured to detect the light energy output from the fiber optic scintillator along a path that is generally parallel to a path of high energy electromagnetic energy incidence on the fiber optic scintillator.

Claim 15 (Currently Amended) A CT system comprising:

Art Unit: 2882

a rotatable gantry having an opening to receive an object to be scanned;

a high frequency electromagnetic energy projection source configured to project a high frequency electromagnetic energy beam toward the object along a projection path;

a scintillator array having a plurality of scintillator cells wherein each cell is configured to detect high frequency electromagnetic energy passing through the object, wherein each cell is configured to initially convert high frequency electromagnetic energy to output-light energy having an intensity and output the light energy along a path generally parallel to the projection path at exceeding an intensity exceeding that initially generated of the high frequency electromagnetic energy detected by the cell and output the light energy along a path generally parallel to the projection path;

a photodiode array optically coupled to the scintillator array and comprising a plurality of photodiodes configured to detect light output from a corresponding scintillator cell, wherein each photodiode outputs a signal indicative of the light output of the corresponding scintillator cell;

a data acquisition system (DAS) connected to the photodiode array and configured to receive the photodiode outputs; and

an image reconstructor connected to the DAS and configured to reconstruct a CT image of the object from the photodiode outputs received by the DAS.

***Allowable Subject Matter***

2. Claims 1, 4-25, and 28-31 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Art Unit: 2882

With respect to claims 1 and 4-8, the prior art fails to teach or fairly suggest a fiber optic scintillator cell comprising a second component formed of a block of optically stimulating material configured to output light at an intensity greater than that output by the block of scintillator material as claimed.

With respect to claims 9-14 and 31, the prior art fails to teach or fairly suggest a detector for a computed tomography system comprising a fiber optic scintillator configured receive high frequency electromagnetic energy from a first direction and convert the high frequency electromagnetic energy to light energy having a first intensity, and further configured to output the light energy in a second direction generally parallel to the first direction at a second intensity exceeding the first intensity as claimed.

With respect to claims 15-22, the prior art fails to teach or fairly suggest a CT system comprising a scintillator array having a plurality of scintillator cells, wherein each cell is configured to initially convert high frequency electromagnetic energy to light energy having an intensity, and output the light energy along a path generally parallel to the projection path at an intensity exceeding that initially generated as claimed.

With respect to claims 23-25, the prior art fails to teach or fairly suggest a method of manufacturing a fiber optic scintillator cell having optical gain comprising forming the first component in a single layer, forming the second component in a single layer, and connecting the first component and the second component layer to one another in a discretely layered structure as claimed.

With respect to claims 28-30, the prior art fails to teach or fairly suggest a detector for a CT system, wherein the detector comprises a pixilated array of scintillation elements, each

Art Unit: 2882

element includes a first component formed of scintillation material and a second component formed of optically stimulatable material, and a pixilated array of photodiodes coupled to receive light emissions from the pixilated array of scintillation elements along a direction parallel to the x-ray path as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Response to Arguments***

1. Applicant's arguments, filed 30 January 2004, with respect to drawings have been fully considered and are persuasive. The objection of drawings has been withdrawn.
2. Applicant's arguments, filed 30 January 2004, with respect to claims 1, 4-25, and 29-31 have been fully considered and are persuasive. The rejection of claims 1, 4-25, and 29-31 under U.S.C. § 112, first paragraph, has been withdrawn.
